

Rocky Mountain Power's Energy Vision 2020

On April 4, 2017, Rocky Mountain Power announced a 20-year Integrated Resource Plan that includes significant investment in Wyoming. The company submitted its requests for regulatory review on June 30, 2017.

The \$3.5 billion investment plan includes:

- “Repowering” the existing company-owned Wyoming wind fleet by 2020 with longer blades and newer technology to increase energy production and extend the life of the projects
- At least 1,100 megawatts of new wind by 2020, primarily in Wyoming
- Construction of a new 140-mile, 500-kilovolt Gateway West transmission segment by 2020

By taking advantage of federal production tax credits, these projects will provide net savings for Wyoming customers and benefits to state and local economies

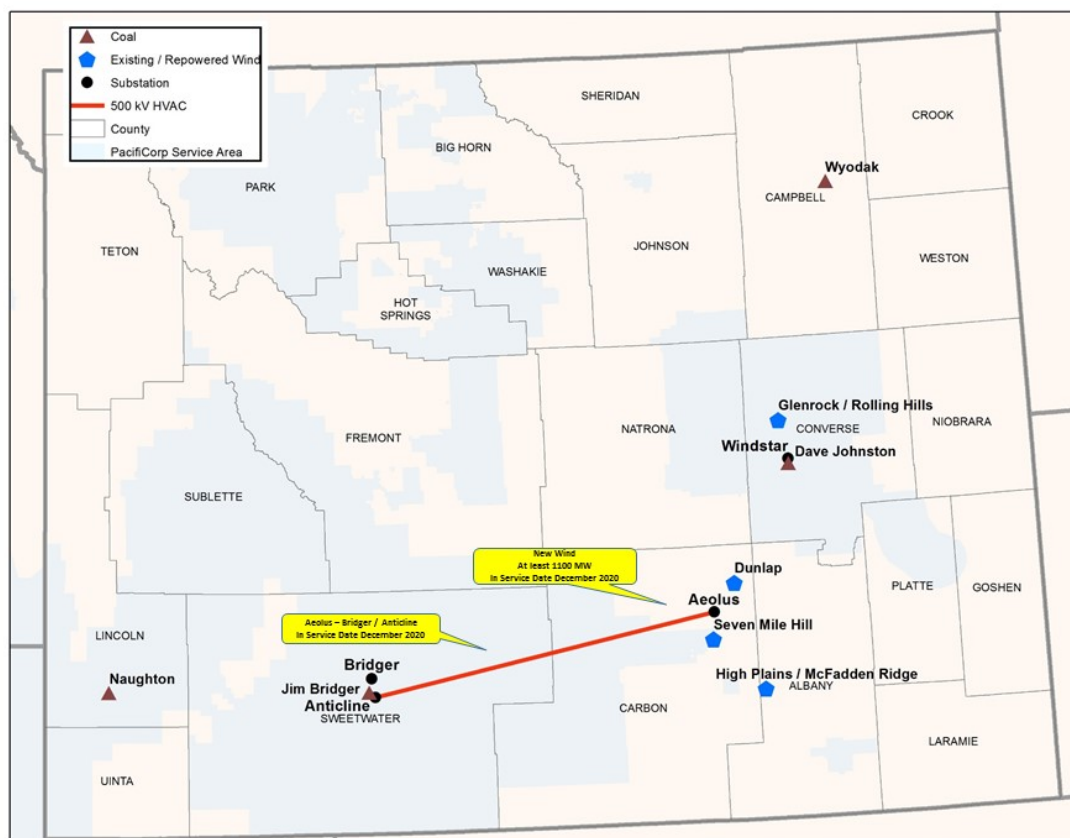

Wyoming Benefits

Our Energy Vision 2020 plan will help diversify the state's economy, create jobs and add to the tax base.

We expect these projects to:

- Create between 1,200 and 1,600 construction jobs in Wyoming
- Add approximately \$115 million in tax revenue through construction
- Add approximately \$11 million annually in tax revenue starting in 2021, growing to approximately \$14 million annually in 2024
